Wild Camping - Bug report

Table of contents

[Login for unregistered user](#)

[Image overlap on Home > View More](#)

[Alignment of search icon](#)

[User able to register email address as Username - potential GDPR breach](#)

[Profile Photo upload not completing](#)

[Add location - uploading image completing](#)

[Login for unregistered user](#)

Env: XX

Branch: XXX

Device: Android 11 (Pixel 3)

Pre requisites

- User does not have a registered account

Steps to reproduce:

*NOTE: this is an intermittent issue and difficult to reproduce

- Navigate to Login screen
- Enter username and password
- When redirected back to login screen Enter the same username and password

Expected result:

- First attempt login: user is presented with an Error message 'Username or password incorrect...'
- When the user tries to login the second time they are presented with the same error messaging around incorrect username and password

Actual result:

- First attempt login: user is presented with Error message 'Username or password incorrect'
- When the user tries to login the second time with the same user details, they receive no Error message about incorrect Username and Password and instead are recognised as a registered user and being directed to brought to the User Profile screen

Note from Developer:

Unable to reproduce this bug right now. Further investigation required. If still unable to reproduce then may put in a speculative fix.

Will advise QA or areas of the app that may be affected by code changes from speculate fix for a regression to be carried out on those areas.

[Image overlap on Home > View More](#)

Env: XX

Branch: XXX

Device: Android 11 (Pixel 3)

Pre requisites

- none

Steps to reproduce:

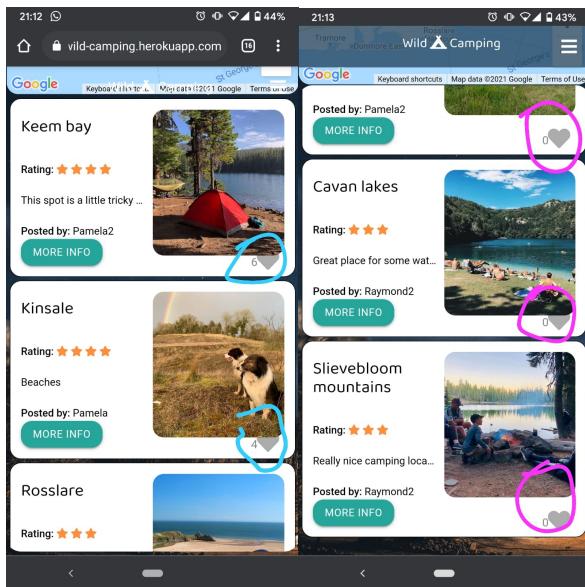

- From home screen, scroll to bottom of screen
- Select 'view more'

Expected result:

- Image on location cards does not overlap onto heart icons

Actual result:

- Image on location cards is overlapping onto heart icons (see attached image)
- Issue is inconsistent

Alignment of search icon

Env: XX

Branch: XXX

Device: Android 11 (Pixel 3)

Pre requisites

- none

Steps to reproduce:

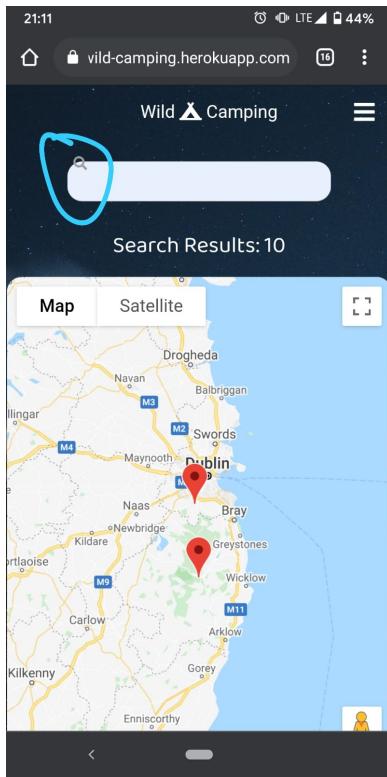

- From home screen, scroll to bottom of screen
- Select 'view more'

Expected result:

- Search icon is aligned with Search bar

Actual result:

- Search icon is too high on the search bar (see screenshot below)

User able to register email address as Username - potential GDPR breach

Env: XX

Branch: XXX

Device:

Tested on below devices but issue is across all platforms

- Android 11 (Pixel 3)
- iOS 14.5.1 (iPhone Xr)

Pre requisites

- User has a registered an account and is logged in

Steps to reproduce:

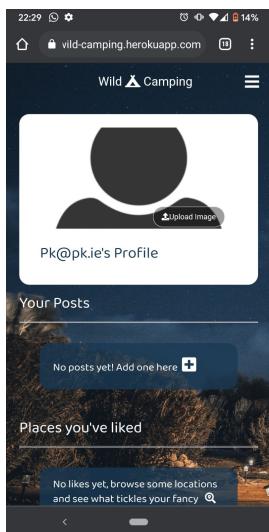

- User logs in
- Navigates to the Profile screen

Expected result:

- Validation on the username text box which restricts users from entering special characters (i.e. @ / !)

Actual result:

- User is able to enter their email address as their username. See attached screenshot

Profile Photo upload not completing

Env: XX

Branch: XXX

Device:

- Android 11 (Pixel 3)
- iOS 14.5.1 (iPhone Xr)

Pre requisites

- User is registered and logged in

Steps to reproduce:

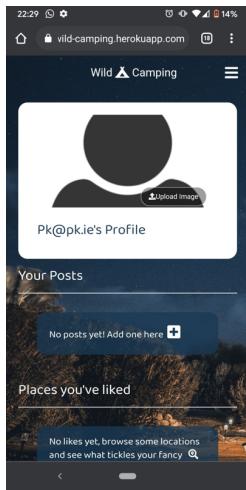

- Navigate to Profile screen
- Tap 'upload image'
- Select image to upload from device

Expected result:

- User is prompted to confirm upload [TBC - not sure what expected result here should be. Should it be the OS that takes over or the app? Maybe OS permissions needs to happen here)
- Image is uploaded and stock image is replaced with new photo

Actual result:

- Users selects image from device
- Once the image is tapped the user is navigated back to the profile screen and no profile image has not been updated

Add location - uploading image completing

Env: XX

Branch: XXX

Device:

- Android 11 (Pixel 3)

Pre requisites

- User is registered and logged in

Steps to reproduce:

- Navigate to 'Add location'
- Fill in form fields on page
- Select 'upload image'
- Select image to upload from device

Expected result:

- User is prompted to confirm upload [TBC - not sure what expected result here should be. Should it be the OS that takes over or the app? Maybe OS permissions needs to happen here)
- Image is uploaded and stock image is replaced with new photo

Actual result:

- Users selects image from device
- Once the image is tapped the user is navigated back to the profile screen and no profile image has not been updated
